Examiner's Amendment

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

In claim 1 line 4, --to go-- has been inserted between "node" and "from".

In claim 4 line 20, "internal output node" has been changed to --first internal node--.

The amendments correct minor typographical errors. Authorization for this examiner's amendment was given in a telephone interview with Elliot Goldberg on 7/19/05.

Allowable Subject Matter

2. Bowers et al. appears to be the most relevant reference of record. Fig. 2 discloses voltage detection circuitry P2/Q1/N2, a capacitor N3, a resistor R4, a reset generator 12 and a discharge circuit P4 as recited in claim 1. The discharge circuit P4 performs the discharge function described in the last clause of claim 1, but not the charge/discharge function described in the second clause of claim 1. The voltage

detection elements directly influence the charging and discharging of the capacitor without a separate charge/discharge circuit as recited in the second clause of claim 1.
